DETAILED ACTION

Allowable Subject Matter

1. Claims 1-25 are allowed.

Reasons for Allowance

2. The following is an examiner's statement of reasons for allowance:

Regarding claim 1, and similar in claims 6, 10, 14, 18, and 22, the prior art of Klosterman (US Patent 5,940,073) and Schein (US Patent 6,002,394) fails to either alone or combine to teach or suggest an information processing apparatus comprising a receiver for receiving multimedia data from a server, wherein the multimedia data including reservation signals and link information of broadcast program signals and the multimedia also being described by a mark-up language; a display for displaying an electronic program guide and at least one link location, with an indicator for displaying the link location; and a processor for setting reservation of program recording based on the reservation signals which are linked to the link location.

Klosterman does show an electronic program guide with an indicator on the display for the link information (Fig. 6b & 6c); however, Klosterman does not suggest the reservation signals included in the multimedia data, and the recording is automatically performed as "the processor is configured to set reservation of program recording based on the reservation signals which are linked to the link location indicated by the indicator" as required and claimed therein. Schein simply provides a conventional scheduling recording using a menu for choosing an option to record (Fig. 18A) and is silent on displaying the electronic program guide with the indicator showing the link information and the step of recording as indicated above.

Art Unit: 2623

Any comments considered necessary by applicant must be submitted no later than the payment of the issue fee and, to avoid processing delays, should preferably accompany the issue fee. Such submissions should be clearly labeled "Comments on Statement of Reasons for Allowance."

Conclusion

3. The prior art made of record and not relied upon is considered pertinent to applicant's disclosure.

Schein et al (US patent 6,133,909) discloses an electronic program guide with conventional recording technique.
